## About

I am a tenure-track research scientist at the **Technologies of Vision** research unit of the **Fondazione Bruno Kessler** in Trento, Italy. My research interests are in 3D perception and understanding, with a focus on object 6D pose estimation. According to Google Scholar, I have an h-index of 14, an i10-index of 14, and my papers have been cited more than 5300 times.

Before joining FBK, I received a PhD in Computational Science from the **Università della Svizzera italiana**

in Lugano, Switzerland, in 2017. During my PhD, under the supervision of prof. **Michael Bronstein**, my research focused on extending deep learning techniques to geometric domains such as 3D shapes and graphs, contributing to the birth of a new research direction called **Geometric Deep Learning**. Prior to that, I obtained an M.S. in Mathematics from the **University of Verona**, Italy, in 2013, and a B.S. in Applied Mathematics from the same institution in 2010.
