About

I'm a tenure-track research scientist at the Technologies of Vision research unit of the Fondazione Bruno Kessler in Trento, Italy. I received a PhD in Computational Science from the Università della Svizzera italiana in Lugano, Switzerland, in 2017. During my PhD, under the supervision of prof. Michael Bronstein, my research focused on extending deep learning techniques to geometric domains such as 3D shapes and graphs, contributing to the birth of a new research direction called Geometric Deep Learning. Prior to that, I obtained an M.S. in Mathematics from the University of Verona, Italy, in 2013, and a B.S. in Applied Mathematics from the same institution in 2010.

My research interests lie in 3D perception and understanding, with a specific focus on object 6D pose estimation and 3D object/scene understanding. According to Google Scholar, I have an h-index of 13, an i10-index of 14 and my papers have been cited around 4970 times.
